**DETAILED ACTION**

1. Claims 16-29 are pending in this application.

***Election/Restrictions***

2. Applicant's election with traverse of Group III, claims 23-29 in the reply filed on May 1, 2006, is acknowledged. The traversal is on the ground(s) that all of the groups can be searched and examined together without undue burden on the examiner. This is not found persuasive because some of the claims do not require photolithography.

The requirement is still deemed proper and is therefore made FINAL.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claims 23-29 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Deng et al. ("Fabrication of Metallic Microstructures Using Exposed, Developed Silver Halide-Based Photographic Film").

Deng et al. Teach a process of fabricating metallic microstructures by exposing and developing a photographic film followed by electroless and electrochemical plating. See Figure 1, page 646 and page 647 "Methods of Fabrication". The claimed process is taught by Deng et al.

5. Claims 23, 26 and 27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Lyman (US Patent 2,854,386).

Lyman teaches a process of forming a silver image and then electroplating the image. See claim 1. Lyman does not teach electroless plating recited by other claims of the present application.
